# Beautiful Xiamen

# Population and MSW growth in Xiamen

Quick urbanization VS Rapid growth of municipal solid wastes (MSW)

Average MSW growth rate: 10.36% per year

# MSW treatment facilities in Xiamen

- ✓ Extremely difficult to find new places for new construction;
- ✓ Effects of “NOT IN MY BACK YARD” are severe.

C: Eastern base  
62.09% MSW  
treatment

B: Western base  
10.55% treatment

A: Xiamen island  
27.36% treatment

# Problems

- ◆ The construction of MSW treatment facilities can not satisfy the growth of MSW production.
- ◆ To reduce MSW production initially by sorting becomes very urgent.

Landfill

Incineration

# Why we need MSW sorting

- **MSW reduction:** to reduce MSW and environmental pollution
- **Recycling:** resources should be recycling
- **Harmless:** to remove hazardous materials with specific methods

# Examples

## Recycling 1 ton paper

Produce 800 kg paper

Wood 3 m<sup>3</sup>

Save 300 kg NaOH

Save 300 kwh electricity

Reduce a large of wastewater

## Recycling 1 ton steel

Save 2500 pounds iron ore

Save 1000 pound coal

Save 2/3 electricity

Save 40 pounds limestone

Reduce pollution and cost

# Launch of MSW sorting

In year 2017, MSW sorting was extensively launched in the city.

MSW sorting refers to the component separation on the basis of their properties, components, values, or the requirement of treatment etc.

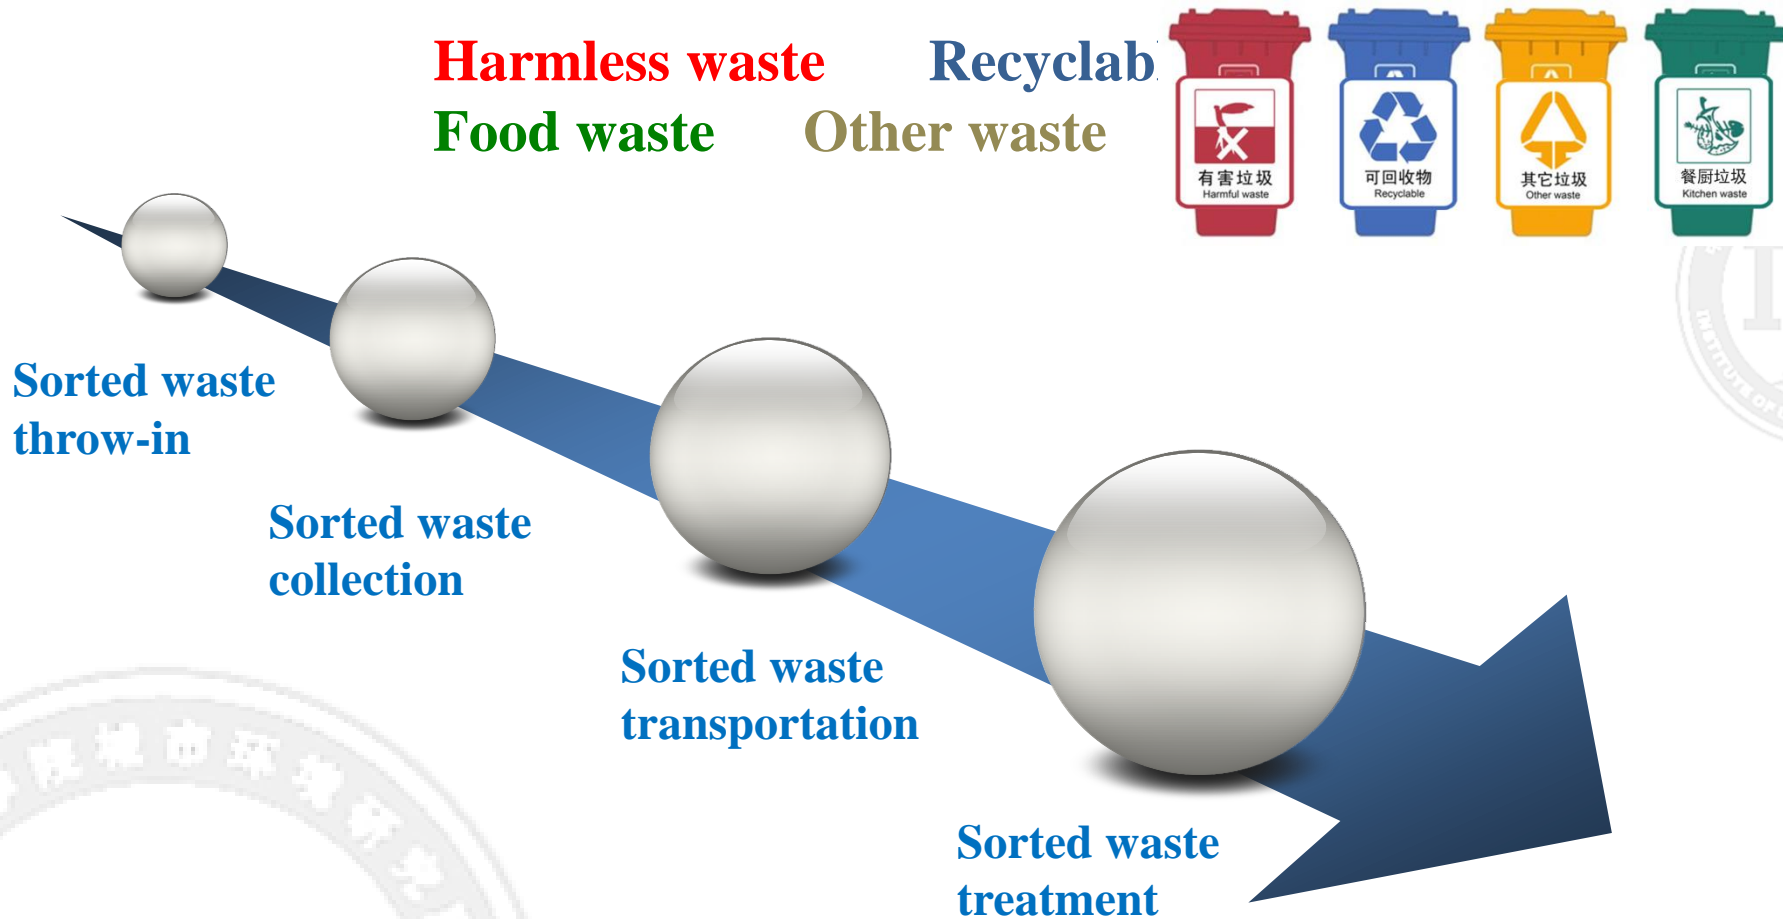

# Legislation

- ❑ 《Measures for the management of household garbage classification in Xiamen special economic zone》 were operated at September 10<sup>th</sup>, 2017.
- ❑ At the same time, 20 supporting documents for MSW sorting were introduced.
- ❑ More and more legislations are active.

# Design the whole process

# Difficulties of MSW sorting

- Citizens lack awareness of classification, difficult to form the habit of garbage classification
- Lack of effective publicity and guidance
- Lack of classified supervision system
- Unreasonable arrangement of small area classification barrel

- The cleaning staff of the community mixed rubbish
- High - rise set bucket, classification collection is difficult
- Scavengers pick up trash at will

- Difficult to plan transit points and routes
- Classified transport capacity is insufficient
- Unreasonable financial input
- Mixed loading of garbage exists
- Transshipment party coordination problem

- Low accuracy of garbage classification
- Processing effect of sound classification
- Undeveloped, prescriptive,
- Integrated classification and processing system

# Step 1: MSW throw in

## Recognize the sorting bins

## (1) Leadership of MSW sorting

- Set up a municipal leading group for the MSW sorting;
- The mayor serves as the group leader;
- The deputy mayor was appointed as the general director.

## (2) All functional departments participated

- The 26 municipal government departments are responsible for waste sorting;
- Each department of their own duties, mutual coordination and joint management.

# Full public participation

- Distributed more than 500000 MSW Sorting **Promotion Manual**;
- **Media:** TV, broadcast, news paper, internet, wechate, etc., to cover the whole city;
- Provide MSW **sorting assistants**: 5 staff in per street, 3 staff and 1 investigator. For the whole city, 659 managers, 3300 investigators, 3324 volunteers.

# Students play important roles

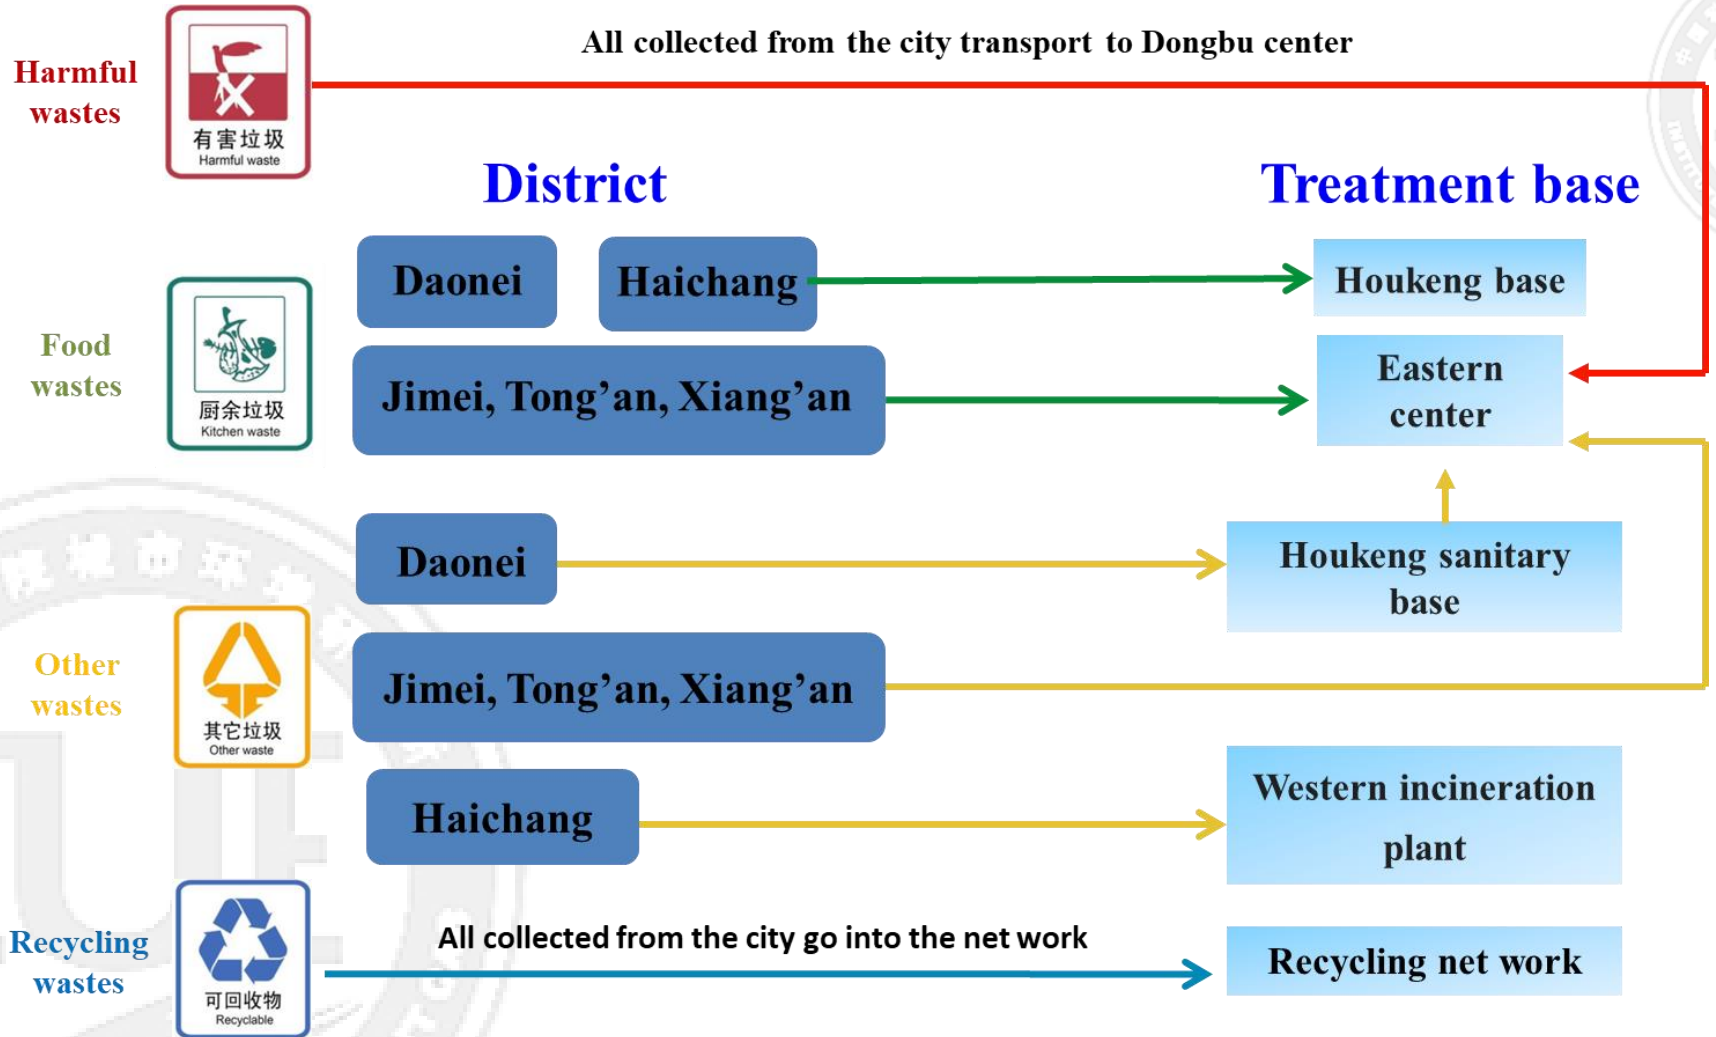

Three kinds of MSW  
Sorting Basic Knowledge  
were issued in Middle,  
Primary schools and  
Kindergartens.

# Step 2: collection and transportation

## Design transportation routes for different sorting wastes

# Transportation monitoring

## Real-time monitoring

## Van and vehicle monitoring

- Vehicle positioning and track supervision
- Vehicle operation status management
- Vehicle fuel consumption management
- Illegal operation of vehicles
- Vehicle video management
- Vehicle statistical analysis

# Step 4: MSW treatment bases

- ✓ To improve the treatment capacity, from 5000 t/d to 7500 t/d;
- ✓ To diversify the treatment processes for different wastes.

Combining 3 platforms, which monitor 504 vans and vehicles, such as 50 road cleaning vehicles, 39 water carts.

# Performance

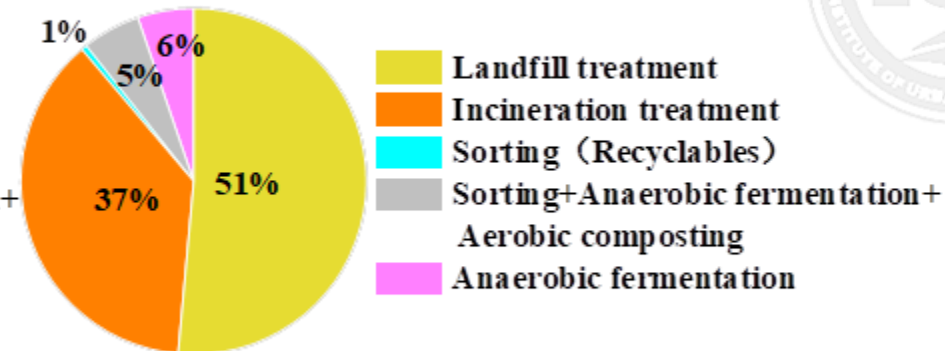

- ✓ In 2020, an average of 1530 T/d recyclables was sorted;
- ✓ MSW treatment capacity decreased from 5526 T/d in 2019 to 5066 T/d in 2020

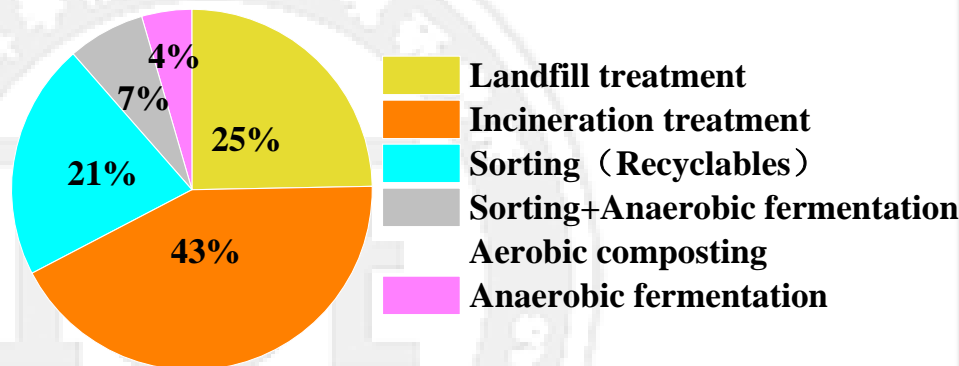

2018

2019

2020

## Year 2018-2020:

- The proportion of **landfill treatment** is significantly reduced to ZERO at 2020.
- **Incineration treatment** is becoming the main mean. The proportion of **recyclables** is significantly increased.

# Outlook: Year 2021-2035

**To boost the city targets on “Carbon Peak” (2025) and “Carbon Neutrality”(2055):**

- ✓ To popularize fine MSW sorting;
- ✓ To promote wide use of new energy vehicles on MSW transportation;
- ✓ To boost biological degradation on organics and reduce incineration;.....

**Thank you for  
attention**
